

The Alliance With Gaia

Passage Eight

There is always more to learn about animals and nature, its a continuing unfolding of celestial beauty.

We have seen this with the wolves, cetaceans and the corvids for example, there is much which is truly fascinating its a journey not a destination, just like our own development.

The two are interrelated, if we are full of arrogance and disdain how can we stop and truly sense and smell the full fragrance of an autumn rose or feel the softness in our heart when a wild deer scampers across a field or the birds chirp in the trees and hedgerows.

Yet equally nature can help heal our dysfunction when such sentiments prevail, its mystical in a way.

The Alliance with Gaia is to care for the Earth which includes the seas, oceans rivers and streams.

The horse in the photo was found in a distressed condition, she had known a better life before being sold on it seemed. She was hyper ventilating and did not have much food.

We spent time together and she had a couple of healings, it is not possible to fix and rescue things but sometimes we may be asked to help.

What does the photograph below convey to you? What is the horse communicating?

By developing perception and our own heart felt connectedness we begin to understand more, beyond the text book bio mechanical model view of animals

I make no apology to those who believe that “humans” create nature and scientists now can direct evolution.

We know how at the drop of a hat the forces of nature can clear away us tiny specs. We need to be humble.

We feel for the gross aberrations “created” in the laboratory by genetic manipulation, rabbits for example with fluorescent jelly fish genes so their eyes glow in the dark, the harvesting of human organs from pigs, cattle that can hardly move for the gigantic muscular tissue they have been genetically manipulated to produce meat for humans.

Farmers and people in certain countries in South America are now in the strange position of having to try to preserve their right to plant natural seeds as opposed to genetically modified ones.

Natural crops have been burned in some cases. Hungary is the first country in the EU it seems to ban genetically modified produce and has even ordered the destruction of genetically modified corn crops.

This is a big area with strong views in favour and against beyond the scope of this course we will touch base on some of it later..

Time and again the issue of waste and destruction comes up in relation to terrestrial farming. Building developments also encroach on wild life habitats.

We need to find a balance where possible. There are farmers who do care about the land and the animals. Some care about the birds of prey who need hedgerows and verges around fields to catch prey, such farmers are able to achieve a balance. We are grateful for their work.

There is a close connection between our spirituality, reverence for nature, the animals and respect for one another.

There is much mis-information about and we work to clear ourselves. Its not an intellectual polemic process. We learn by observation and non infringement that is not to say it is not relevant for us to study information about the care of animals and the environment, its the stance and the perspective which counts.

The Native American peoples never took more than they needed from nature, they had a respect for her and the buffalo herds once thrived.

Have a look at these 2 video clips and see what information comes to you, words and feelings.

Birds Of Prey

These animals exemplify many qualities, power, perception, beauty, mystery agility, what else do they convey to you?

The Barn owl pictured above was photographed in the wild in western England, barn owls are an endangered species. They are top predators.

The barn owl is a silent hunter and it detects sounds via its heart shaped facial disc – which is a parabola, a reflecting surface like a satellite dish concentrating widely separated sound waves to a point.

Its made from stiff feathers that reflect sound towards the ear openings on the sides of the head which amplifies the overall signal.

In the film “Birds Of Prey” see whether you can catch a glimpse of the white owl using this feature.

Owls can rotate their heads as much as 270 degrees, it's so amusing and curious to see.

They are able to do this without damaging vascular or nerve tissue due their structural design.

The birds of prey are very powerful beautiful and mystical, many of them are now endangered due to the activities of humans, hunting, agro chemicals, habitat destruction, many things.

Fortunately there are various organizations helping the birds by education and conservation programs e.g. the Hawk And Owl Trust in the UK and other organizations around the world.

Its simply not all doom and gloom is it...

I am not in favour of falconry per se, however where the birds are kept well and respected, they can help educate people about the need to preserve habitats for the bird in their natural wild life state it.

We went to visit a very experienced falconer who showed high welfare standards and care for the birds.

Not knowing what to expect I explained that I would not feed the birds or take part in falconry, just connect with the birds if they wanted.

Recently a buzzard was brought in for care close to death it had a tick near one of its eyes and was unable to fly.

The falconer had the bird treated and then cared for it on his premises. He was informed that the bird would probably die.

The aim was to care for the bird and re release it into the wild. The buzzard began to respond and has shown the will to live eating heartily a diet of rats.

The bird invited me to work with it, normally I would not film an initial encounter but the way was clear.

I worked with the bird a second time that day, without the camera not wanting to intrude. The bird was later seen perching and fluttering.

Please see videos 3 and 4 in our film library.
Work sequentially.

Video 3

Buzzard Healing

1. What did you observe and learn from the video clip?
2. How did the buzzard respond to the energy work?

Video 4 “Birds of Prey”

Questions

1. What kinds of birds do you see in the film?
2. What have you learned?
3. Check carefully the video and you should be able to see fleetingly at a specific point the white owl orientate its head using its heart shaped facial disc.
